## Pond Size Estimation

Please help us make an initial estimate of the approximate size of your pond.

- 1) Circle the shape which most nearly matches your pond's shoreline.
- 2) Step off the distance around the pond. Walk as closely as possible to the anticipated shoreline. Record the total number of steps along this shoreline.
- 3) Record the estimated length of your step. (usually 1.5 to 3 feet)

Your Conservation Agent or Fisheries Biologist will verify the water acreage, determine if your pond can be approved for stocking, and calculate the proper number of fish to be stocked.

## **Pond Shapes**

Number of steps \_\_\_\_

Length of step \_\_\_\_\_\_ feet

## Pond Location Map

If your pond is **10 acres** or larger, the hatchery truck will deliver the fish directly to your impoundment. Consequently, a specific legal description is required to ensure proper delivery. Please add this to the bottom of your map.
